Our Automated Financial Blueprint

A Clear, Simple Plan to Build Steady Monthly Income Together

Prepared with Love for Cha Cha

---

1. What Are We Trying to Achieve?

The goal is very simple: **To create a steady, stress-free monthly income stream in US Dollars (paid directly to our Binance account in Nigeria) without sitting in front of a computer screen all day.**

Instead of doing manual trading where emotions and stress cause people to lose money, we have built a **smart automated computer software (a trading robot)**. This robot follows strict mathematical rules, never gets greedy or afraid, and does all the work automatically in the cloud 24 hours a day.

2. How Does It Work? (The 'Company Funding' Model)

Normally, people think you need millions of your own Naira to trade. **That is not how we are doing it.** We are using a modern system called a **Prop Firm (Funding Company)**.

Think of it like this: Imagine a big transportation company that has lots of brand-new delivery trucks. They say: *'We have a truck worth $50,000. You pay a small one-time testing fee of $35 to $50 (~■60,000 Naira) to prove your smart driver can drive safely. Once proved, you can drive our $50,000 truck to make deliveries. Whenever you make money, you keep 85% of all profits, and we keep 15%.'*

Why this is the safest business model in the world:

• **Our Life Savings Are Never at Risk:** We only put down a small one-time fee of **~$35 to $50 USD (~■50,000 to ■80,000 Naira)**.
• **We Trade Their $50,000 USD (Over ■82 Million Naira):** All profits generated belong to us (85% share).
• **Zero Debt:** Even if a trade goes wrong, we owe zero money. The only money that ever leaves our pocket is that tiny initial starting fee.

3. Why Does Our Robot Win? (Our Proven Edge)

Our robot trades the **top 500 biggest American companies (the S&P; 500)** like Apple, Microsoft, Amazon, and Google. It follows one simple rule: **Buy low when there is a temporary discount, and sell 2 to 3 days later when the price bounces back to normal.**

• **Real 15-Year Test (2011 to 2026):** We tested our robot through 15 full years of real historical market data, including the 2020 COVID crash and the 2022 inflation crash. It survived every single crisis.
• **78% Win Rate:** Out of every 10 trades the robot places, roughly **8 trades are profitable**.
• **Safety Belt (Stop Loss):** Every trade has an automatic safety limit. If a trade goes against us, the robot cuts it immediately at a tiny loss so the account is 100% protected.

4. How Much Do We Invest & How Much Do We Make? (ROI)

Here are the exact numbers based on our mathematical backtest on a single **$50,000 Funded Account** (Exchange rate: $1 USD = ■1,650 Naira):

Timeframe	Initial Cost Out of Pocket	Your 85% Cash Profit ($ USD)	Your 85% Cash Profit (■ Naira)	Return on Investment (ROI)
Monthly Average	$35 - $50 (One-time)	**$500 - $650 / month**	**■825,000 - ■1,070,000 / mo**	Over 1,000% every month
6 Months Total	$35 - $50 (One-time)	**$3,000 - $3,900 USD**	**■4,950,000 - ■6,435,000 NGN**	~8,000% Return
1 Year Total	$35 - $50 (One-time)	**$6,470 - $7,900 USD**	**■10,600,000 - ■13,000,000 NGN**	~16,000% Return

5. The Future: Scaling to Multiple Accounts

Here is where this turns into life-changing wealth. Once our first account is proven and paying us every 2 weeks, we do not stop there. We use our software's **'Trade Copier'** feature.

When the robot spots an opportunity, it places **1 trade**. In less than 0.01 seconds, that exact trade is duplicated across 2, 5, 10, or 20 accounts simultaneously! We do zero extra work, but our payouts multiply:

Number of Accounts	Total Trading Capital	Monthly Take-Home ($ USD)	Monthly Take-Home (■ Naira)	1-Year Cashflow (■ Naira)
1 Account ($50k)	$50,000 USD	$539 / month	**~■890,000 / month**	■10,676,000 NGN
2 Accounts ($100k)	$100,000 USD	$1,078 / month	**~■1,780,000 / month**	■21,350,000 NGN
5 Accounts ($250k)	$250,000 USD	$2,695 / month	**~■4,450,000 / month**	■53,380,000 NGN
10 Accounts ($500k)	$500,000 USD	$5,390 / month	**~■8,900,000 / month**	■106,760,000 NGN
20 Accounts ($1.0M)	$1,000,000 USD	$10,780 / month	**~■17,800,000 / month**	**■213,500,000 NGN**

6. How Do We Get Paid in Nigeria?

• **Payout Frequency:** The funding company allows withdrawals every **14 days (twice a month)**.
• **Direct to Crypto:** Profits are sent in **USDT (crypto dollar)** directly to our **Binance or Bybit wallet**.
• **Instant Naira Conversion:** Within 5 minutes on Binance P2P, the USDT is converted to Naira and lands directly in our local Nigerian bank account (GTBank, Access, Kuda, etc.) at the official black market rate.

7. Our Step-by-Step Action Plan

Step 1: Start Small (~$35 - $50 USD / ~■60k - ■80k NGN)
We buy our first account on FundedNext using crypto from Binance. We do not risk anything beyond this small fee.

Step 2: Connect the Software
The robot connects to our account and runs automatically 24/7 in the cloud. It sends updates straight to my Telegram phone app whenever a trade happens.

Step 3: Collect Our First Payout
We withdraw our first profits in USDT to Binance. We take out our initial $50 starting fee so our business is **100% risk-free forever**.

Step 4: Reinvest Profits to Scale
We use part of the profits earned (not our personal money) to add a 2nd, 3rd, and 5th account, steadily climbing toward **■4M to ■8M+ Naira every month**.

A Note to Cha Cha:
This is not gambling, and it is not guesswork. It is a carefully engineered business built on 15 years of proven mathematical data. Our downside is strictly capped at less than ■80,000, while our upside can comfortably take care of our family and our future. I'm excited to embark on this journey with you by my side! ❤■
