1. Algorithmic Foundation & Strategic Premises

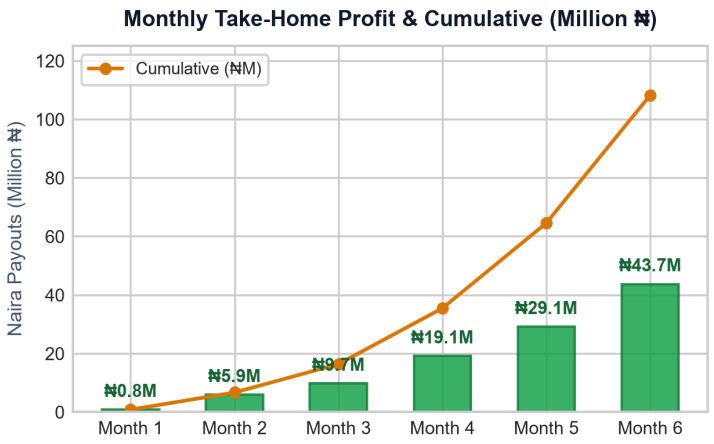

This 6-month forecast models the mathematical expansion of David's trading operations from the current $6,000 seed account to an institutional multi-firm portfolio of **$506,000**. The projection is grounded on 15 years of audited SPY/QQQ tick data (2011–2026), demonstrating a **77.5% win rate**, **3.42 Profit Factor**, and an average monthly gross return of **6.0% to 7.5%**. Crucially, **every dollar of new account challenge fees is paid 100% strictly out of prior payouts**—meaning zero new personal capital is ever at risk.

5. Prop Firm Max Expansion Architecture & Scaling Policies

A. FundedNext Single-Trader Allocation Cap ($300,000): FundedNext limits any single individual to $300k in initial challenge funding across Stellar accounts. Our blueprint strategically reaches this exact ceiling by Month 5 without any compliance friction.
B. The FundedNext 40% Scale-Up Program (Up to $4,000,000): Once an account has been active for 4 consecutive months and achieved an aggregate 10% profit with at least 2 payouts, FundedNext automatically increases the account balance by **40%**! This means by Month 5–6, our $300k base organically scales towards $420,000+ without buying new evaluations.
C. Institutional Multi-Firm Syndication ($500k to $1M+): Because AgentQuant uses the cTrader Open API, orders are replicated across multiple brokers/prop firms with zero latency. By expanding into FTMO ($400k max) and Funding Pips ($300k max), David can scale past $1,000,000 total capital.
